

AccountPulse Paid Media Growth Review

Analysis date 18 Aug 2026 · Explainable deterministic engine · No AI-calculated metrics

DATA COVERAGE

72 rows · 4 campaigns · 1–18 Aug 2026 · Currency HKD

Performance Snapshot

TOTAL SPEND HKD 23,760	PROJECTED MONTH-END HKD 40,920	MONTHLY BUDGET HKD 50,000	BUDGET UTILISATION 81.8%
CTR 4.16%	CPC HKD 1.43	CPA HKD 146.67	ROAS 2.41x

Executive Summary

- Projected month-end spend is 81.8% of budget, signalling underspending risk if the current pace continues.
- CPA Decline Campaign deteriorated from HKD 100 to HKD 180; both windows pass the minimum-volume guardrail.
- Video Test A shows simultaneous CTR decline and CPC increase, supporting a creative-performance review without claiming a confirmed cause.
- Growth Prospecting qualifies for a controlled scaling test; Low Volume Test is withheld due to insufficient data.

Campaign Performance

Campaign	Spend	Impr.	Clicks	Conv.	CTR	CPC	CPA	ROAS
Growth Prospecting	10,800	216,000	8,640	61	4.00%	1.25	177.05	2.82x
CPA Decline	8,180	147,500	5,620	65	3.81%	1.46	125.85	2.38x
Creative Deterioration	3,880	18,000	1,660	36	9.22%	2.34	107.78	1.86x
Low Volume Test	900	3,600	90	0	2.50%	10.00	N/A	0.00x

Four evidence-backed alerts generated · one low-volume campaign withheld from conclusions

Triggered Alerts & Evidence

Every decision is produced by deterministic rule logic and contains traceable evidence.

BUDGET PACING

MEDIUM PRIORITY

Underspending Risk

What happened: Linear pacing projects HKD 40,920 at month end—81.8% of the HKD 50,000 budget and below the 90% threshold.

MTD SPEND HKD 23,760	PROJECTED HKD 40,920	BUDGET HKD 50,000	USE 81.8%
-------------------------	-------------------------	----------------------	--------------

Why it matters: Persistent under-pacing can leave planned growth capacity unused, but it does not justify indiscriminate spending.

CPA DETERIORATION

HIGH PRIORITY

CPA Deterioration Detected

What happened: CPA increased 80.0% for CPA Decline Campaign when the most recent seven days were compared with the prior seven days.

PREVIOUS CPA HKD 100	RECENT CPA HKD 180	CHANGE +80.0%	CONVERSIONS 28 → 21
-------------------------	-----------------------	------------------	------------------------

Why it matters: The change passes the 15-conversion guardrail in both periods and therefore deserves diagnosis.

CREATIVE PERFORMANCE

HIGH PRIORITY

Creative Performance Deterioration

What happened: Video Test A recorded a 20.0% CTR decline while CPC increased 50.0% across the two comparison windows.

CTR 10.0% → 8.0%	CPC 2.00 → 3.00	RECENT IMPR. 7,000	RECENT CLICKS 560
---------------------	--------------------	-----------------------	----------------------

Why it matters: This is a verified performance signal, not proof of creative fatigue or any other single cause.

CONTROLLED SCALING

MEDIUM PRIORITY

Controlled Scaling Opportunity

What happened: Growth Prospecting delivered a recent CPA 40.0% below the HKD 250 target with 28 recent conversions and improving efficiency.

RECENT CPA HKD 150	TARGET CPA HKD 250	BELOW TARGET 40.0%	WOW CPA -25.0%
-----------------------	-----------------------	-----------------------	-------------------

Why it matters: The evidence supports a measured scaling test; no live budget is automatically changed.

Insufficient Data — Low Volume Test

Both periods recorded zero conversions. The workflow returns an insufficient-data state instead of a misleading CPA or scaling alert.

Recommended Action Plan

Recommendations are evidence-linked next steps. All campaign changes require human review and approval.

HIGH PRIORITY

Diagnose CPA deterioration

Scope: CPA Decline Campaign

RECOMMENDED ACTIONS

- Review audience, placement, bid, landing-page and offer changes between the windows.
- Treat each factor as a hypothesis, not a confirmed cause.
- Isolate one material variable before applying a corrective change.

MONITOR

- CPA and conversion volume
- Spend, CTR and CPC
- Recent campaign-setting changes

Review timing: 48–72 hours after the approved change, or after a meaningful new conversion sample.

Decision guardrail: The volume threshold is met, but the data still does not prove causality.

HIGH PRIORITY

Test a controlled creative refresh

Scope: Video Test A

RECOMMENDED ACTIONS

- Prepare one alternative with a controlled hook, visual or format change.
- Keep audience, placement and optimisation settings stable.
- Review frequency and audience overlap if those fields are available.

MONITOR

- CTR and CPC
- Impressions and clicks
- CPA after conversions accrue

Review timing: 48–72 hours or once the replacement reaches the same volume guardrail.

Decision guardrail: Do not label the signal creative fatigue without frequency, audience or placement evidence.

MEDIUM PRIORITY

Reallocate budget with efficiency controls

Scope: Account level and Growth Prospecting

RECOMMENDED ACTIONS

- Prioritise campaigns already meeting efficiency targets.
- Test a measured 10–20% increase for Growth Prospecting.
- Avoid changing budget, audience and creative simultaneously.

MONITOR

- Projected month-end spend
- CPA versus target
- Conversion volume and stability

Review timing: 48–72 hours after any approved allocation change.

Decision guardrail: Underspending is a pacing signal—not evidence that every remaining dollar should be spent.

Methodology & Limitations

Forecast: Month-to-date spend ÷ 18 elapsed calendar days × 31 days. Linear pacing estimate; not ML.

Comparison windows: 12–18 Aug 2026 versus 5–11 Aug 2026, anchored on the analysis date.

Boundaries: All metrics and rules are calculated deterministically from the CSV. Creative deterioration is a signal, not a confirmed cause. ROAS is shown only when conversion value is present. The workflow never modifies live campaigns or connects to Meta Ads API.

AI boundary: Optional AI narrative may only restate verified findings; it cannot calculate metrics, decide rules or invent causes.
